

Infectious Disease

Since our pioneering work on penicillin in the 1940s, Pfizer has a long and proud heritage of addressing evolving infectious disease challenges, developing vaccines and anti-infective medicines that continue to improve the lives of patients around the globe. Pfizer is currently a leading global anti-infectives company offering one of the industry's largest and most diverse portfolios of more than 80 anti-infective therapies available across a wide number of countries.

We remain committed to developing creative and action-driven solutions that go beyond just medicine, including in the areas of: active stewardship, innovative surveillance tools, global policy leadership, diversified portfolio of medicines and vaccines, and responsible manufacturing practices.

Given the unique scientific, economic, public health and environmental challenges presented by AMR, collaboration between stakeholders is essential to maximize progress. Working together with the entire infectious disease stakeholder community, Pfizer continues to strive to overcome AMR challenges by leveraging our expertise and capabilities to help meet patient needs.
